Harry Brook Runs Prediction

AI Course Project Proposal | Muhammad, FUUAST, Karachi

1. Selected Player

Harry Brook (England cricketer, right-handed batter)

2. Objective

> **Predict how many runs Harry Brook will score in his next match.**

3. Approach

Supervised learning (the output is a number, runs).

4. Model

Regression Model, compared with **Random Forest**.

5. Reason

- Supervised: every past match has a known runs value, so the data is labeled.
- Regression Model: handles continuous values like runs, home or away, and competition, and is easy to interpret.
- Random Forest: combines many trees to reduce overfitting and give more stable predictions.

6. Dataset (Authentic Sources)

Main source (Sofascore): Harry Brook match-by-match stats

Verification source (ESPNcricinfo): Harry Brook player stats

The dataset has not been collected yet. Match records (runs, averages, minutes, and format stats) will be collected from Sofascore and cross-checked against ESPNcricinfo to confirm they are authentic. The models will be prepared once the dataset is ready.
